SUMMARY

4+ years of full-lifecycle ownership of 25+ production ML systems for B2B SaaS Revenue Intelligence. Designed, productionized, and operated systems spanning EOQ revenue forecasting, pipeline projection, marketing mix modeling, multi-touch attribution, and propensity scoring at daily scale. Transforms CRM, funnel, and campaign data into revenue forecasts and GTM decision systems.

EXPERIENCE

AI Engineer

Revsure AI

Dec 2024 – Present | ~1.5 yrs, Full-Time

- Improved end-of-quarter booking forecast accuracy by ~52% through forecast-category feature engineering on the production revenue prediction model
- Built two production forecast adjustment layers: time-decay (re-weights recent quarters over older history) and average-index (day-of-quarter historical rates as early-quarter fallback); the combined macro forecast system maintains overall pipeline MAPE below 10%
- Built model explainability for all forecast outputs: SHAP for tree models (XGBoost) and coefficient contribution for linear models (Ridge), logging feature attributions to BigQuery and displaying them in customer-facing dashboards
- Built the Generic Regressor Framework: standardizes feature engineering, algorithm selection (XGBoost, LightGBM, CatBoost, Ridge), RandomizedSearchCV tuning, quarter-aware validation, and production scoring/writeback; configurable via 30+ runtime parameters for per-customer behavior without code changes
- Built a production Model Metric Dashboard tracking MAPE, wMAPE, MAE, RMSE, and classification metrics across all deployed models for degradation detection and retraining validation

Data Scientist

ADA Asia

Apr 2022 – Dec 2024 | 2 yrs 9 mos, Full-Time

- Architected and productionized the Pipeline Projection Engine for 15+ enterprise customers: 8+ ML model families (propensity, deal size, demand generation, stage transitions) aggregate bottom-up into daily multi-quarter revenue projections, scoring millions of records daily; pipeline models achieve 80%+ F1-score and booking conversion models 85-95%
- Engineered the Marketing Mix Modeling platform from research through production: measures each channel's pipeline contribution via saturation curves (Hill function), adstock decay, and seasonal decomposition, with a scenario planner for budget reallocation; achieves 5-15% MAPE across 60+ channels including 10+ paid channels
- Owned the Revenue Forecasting Platform through its full lifecycle: from a quarter-to-date heuristic into a production XGBoost system with leakage-safe cross-validation and daily scoring across current and future quarter horizons
- Built a four-model propensity scoring suite (accounts, leads, opportunities, demand generation) that assigns daily conversion likelihood scores across multiple quarter horizons, with SHAP-based feature explanations and a statistical fallback for low-data customers
- Optimized production data pipelines: rewrote revenue metrics computation in distributed PySpark on GCP Dataproc (~1 day to ~3 minutes) and parallelized model training via joblib (5-6 hrs to 1 hr across 30+ customer tenants)

AWARDS & RECOGNITION

AQUA SPOT Award, ADA Global | Nov 2024, sustained ML platform ownership and delivery across the Revenue Intelligence product
Star of the Month, Revsure AI | Apr 2026, consistent system improvement and technical delivery as AI Engineer

TECHNICAL SKILLS

ML Engineering	Python • XGBoost • scikit-learn Pipelines • LightGBM • CatBoost • Custom Transformers • Feature Engineering • Leakage-Safe Validation
Forecasting	EOQ Prediction • Multi-Horizon Forecasting • SARIMAX • STL Decomposition • Time-Decay Adjustment • Revenue Forecasting
Applied ML	SHAP Explainability • BayesianRidge • Propensity Modeling • Markov Chain MTA • Entity Resolution • Model Monitoring
Marketing Science	Marketing Mix Modeling • Hill Saturation Curves • Adstock Decay • Response Curves • Scenario Planning • Attribution
Data & Cloud	PySpark • BigQuery • GCP Dataproc • Airflow • Cloud Storage • SQL • Production ML Pipelines

EDUCATION

Bachelor of Information Technology, T.Z.A.S.P. Pragati College, Dombivli | 2020
PG Program in Data Analytics, Imarticus Learning, Thane | 2022
IBM Data Science Professional Certificate | IBM × Coursera (2021)
