

Akash Sharma

AI / ML Engineer - Production ML & Revenue Intelligence

Bengaluru, India | +91 8422081717 | akashsharmaxiv@gmail.com | linkedin.com/in/akash-sharma-01775b14a | github.com/CosmiX-6 | akashlabs.dev

SUMMARY

AI/ML Engineer with 4+ years building and operating production ML systems for B2B SaaS revenue intelligence. Owned 25+ systems spanning revenue forecasting, pipeline projection, propensity modeling, attribution, and marketing mix modeling, scoring millions of records daily. Strong across modeling, leakage-safe validation, explainability, monitoring, distributed data processing, and production ML pipelines on GCP.

EXPERIENCE

AI EngineerDec 2024 – Present | Full-Time

Revsure AI

- Held booking model MAPE in the 5–15% range through forecast-category feature engineering, with daily end-of-quarter forecast accuracy of ~85–99% validated against actual quarter-end outcomes
- Designed two production forecast adjustment layers (time-decay and average-index), bringing the combined macro forecast system to <10% overall pipeline MAPE
- Productionized model explainability across XGBoost and Ridge forecasts using SHAP and coefficient attribution; logged feature contributions to BigQuery and surfaced them in customer-facing dashboards
- Built a ML Regression Framework covering feature engineering, algorithm selection (XGBoost, LightGBM, CatBoost, Ridge), RandomizedSearchCV, quarter-aware validation, scoring/writeback, and 30+ runtime parameters for customer-specific behavior without code changes
- Built a production Model Metric Dashboard tracking MAPE, wMAPE, MAE, RMSE, and classification metrics for degradation detection and retraining validation

Data ScientistApr 2022 – Dec 2024 | Full-Time

ADA Asia

- Architected and productionized a Sales Pipeline Forecasting system for 15+ enterprise customers; 8+ ML model families aggregate bottom-up into daily multi-quarter revenue projections across millions of records
- Engineered the Marketing Mix Modeling platform from research through production using Hill saturation curves, adstock decay, seasonal decomposition, and scenario planning; 5-15% MAPE across 60+ channels including 10+ paid channels
- Owned the Revenue Forecasting Platform end-to-end, evolving a quarter-to-date heuristic into a production XGBoost system with leakage-safe cross-validation and daily scoring across current and future quarter horizons
- Built a four-model propensity scoring suite for accounts, leads, opportunities, and demand generation, with multi-horizon conversion likelihoods, SHAP explanations, and a statistical fallback for low-data customers
- Cut revenue-metric pipeline runtime from ~1 day to ~3 minutes using distributed PySpark on GCP Dataproc; parallelized model training from 5-6 hours to ~1 hour across 30+ customer tenants

PERSONAL PROJECTS

Narovva - Autonomous News-to-Social Publishing Engine

github.com/CosmiX-6/narovva

- Designed and shipped an end-to-end autonomous publishing system that discovers news, structures an LLM brief, deterministically renders branded carousels, optionally assembles Reels, generates captions, publishes via Instagram Graph API, and records post history
- Built the orchestration layer around independently versioned info-snipe and poster-core packages; added channel configuration, scheduling, PostgreSQL persistence, temporary Vercel Blob hosting, retries, deduplication, and per-article fault isolation
- Kept LLM use constrained to article understanding and caption generation; made layout, scheduling, publishing state, and failure handling deterministic and testable. Live channel runs hourly through GitHub Actions and publishes when its schedule is due

AWARDS & RECOGNITION

AQUA SPOT Award, ADA Global | Nov 2024, sustained ML platform ownership and delivery across the Revenue Intelligence product  
Star of the Month | Apr 2026, consistent system improvement and technical delivery as AI Engineer

TECHNICAL SKILLS

|                    |                                                                                                                                       |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| ML Engineering     | Python • XGBoost • scikit-learn Pipelines • LightGBM • CatBoost • Custom Transformers • Feature Engineering • Leakage-Safe Validation |
| Forecasting        | EOQ Prediction • Multi-Horizon Forecasting • SARIMAX • STL Decomposition • Time-Decay Adjustment • Revenue Forecasting                |
| Applied ML         | SHAP Explainability • BayesianRidge • Propensity Modeling • Markov Chain MTA • Entity Resolution • Model Monitoring                   |
| Marketing Science  | Marketing Mix Modeling • Hill Saturation Curves • Adstock Decay • Response Curves • Scenario Planning • Attribution                   |
| Data & Cloud       | PySpark • BigQuery • GCP Dataproc • Airflow • Cloud Storage • SQL • Production ML Pipelines                                           |
